

generalized conceptual principle
triangle is a triangle

“special forward experiences in the terms of specific sensorial condition & those calculated forecast conditions materialize”

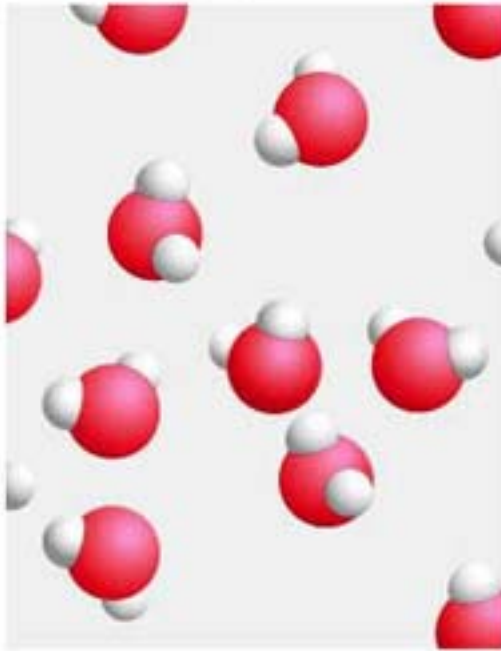

natural law

Solid

Liquid

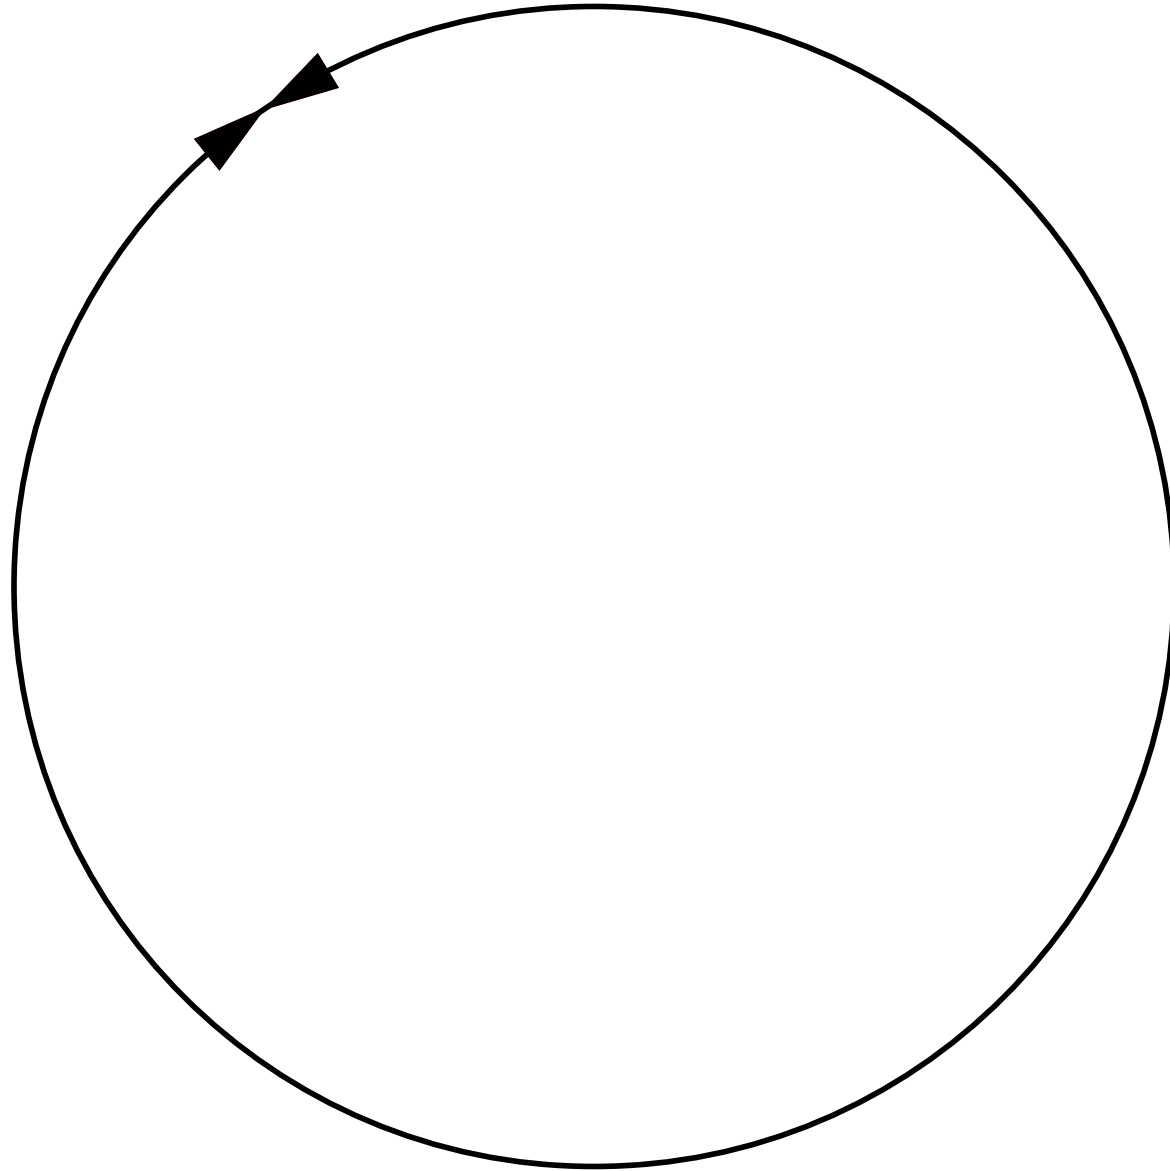

Gas

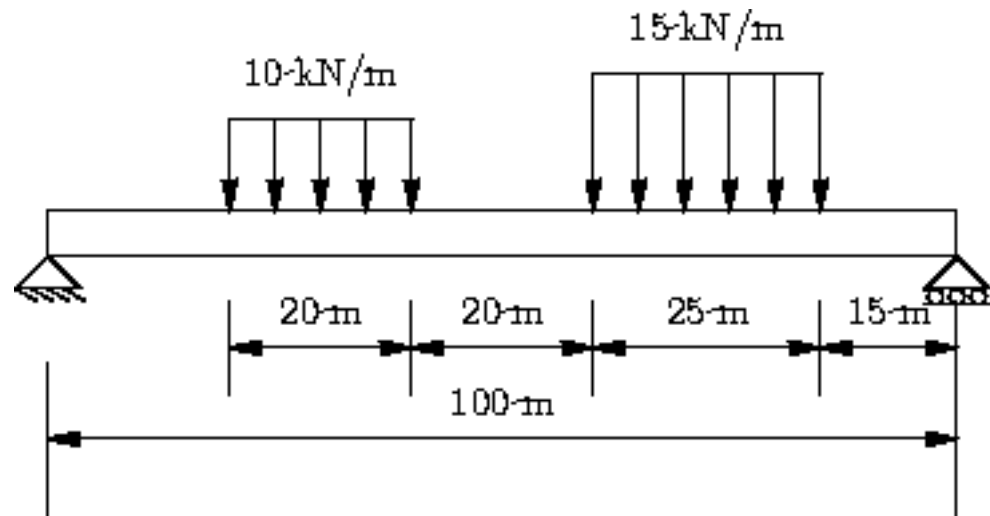

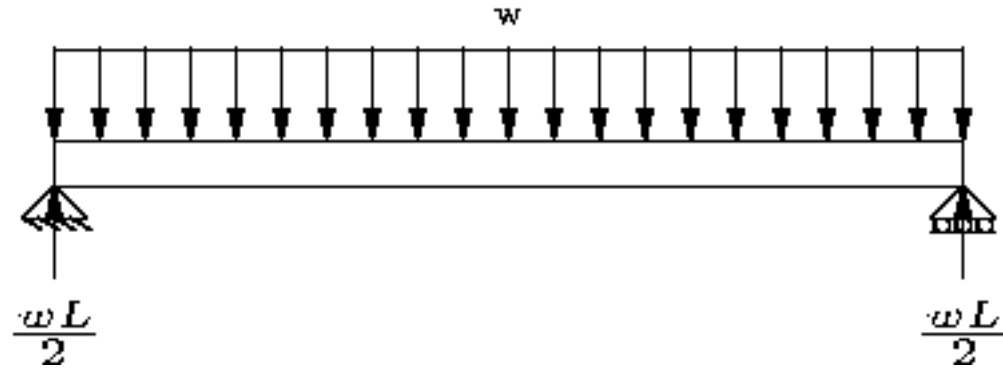

law of conservation of energy

infinite

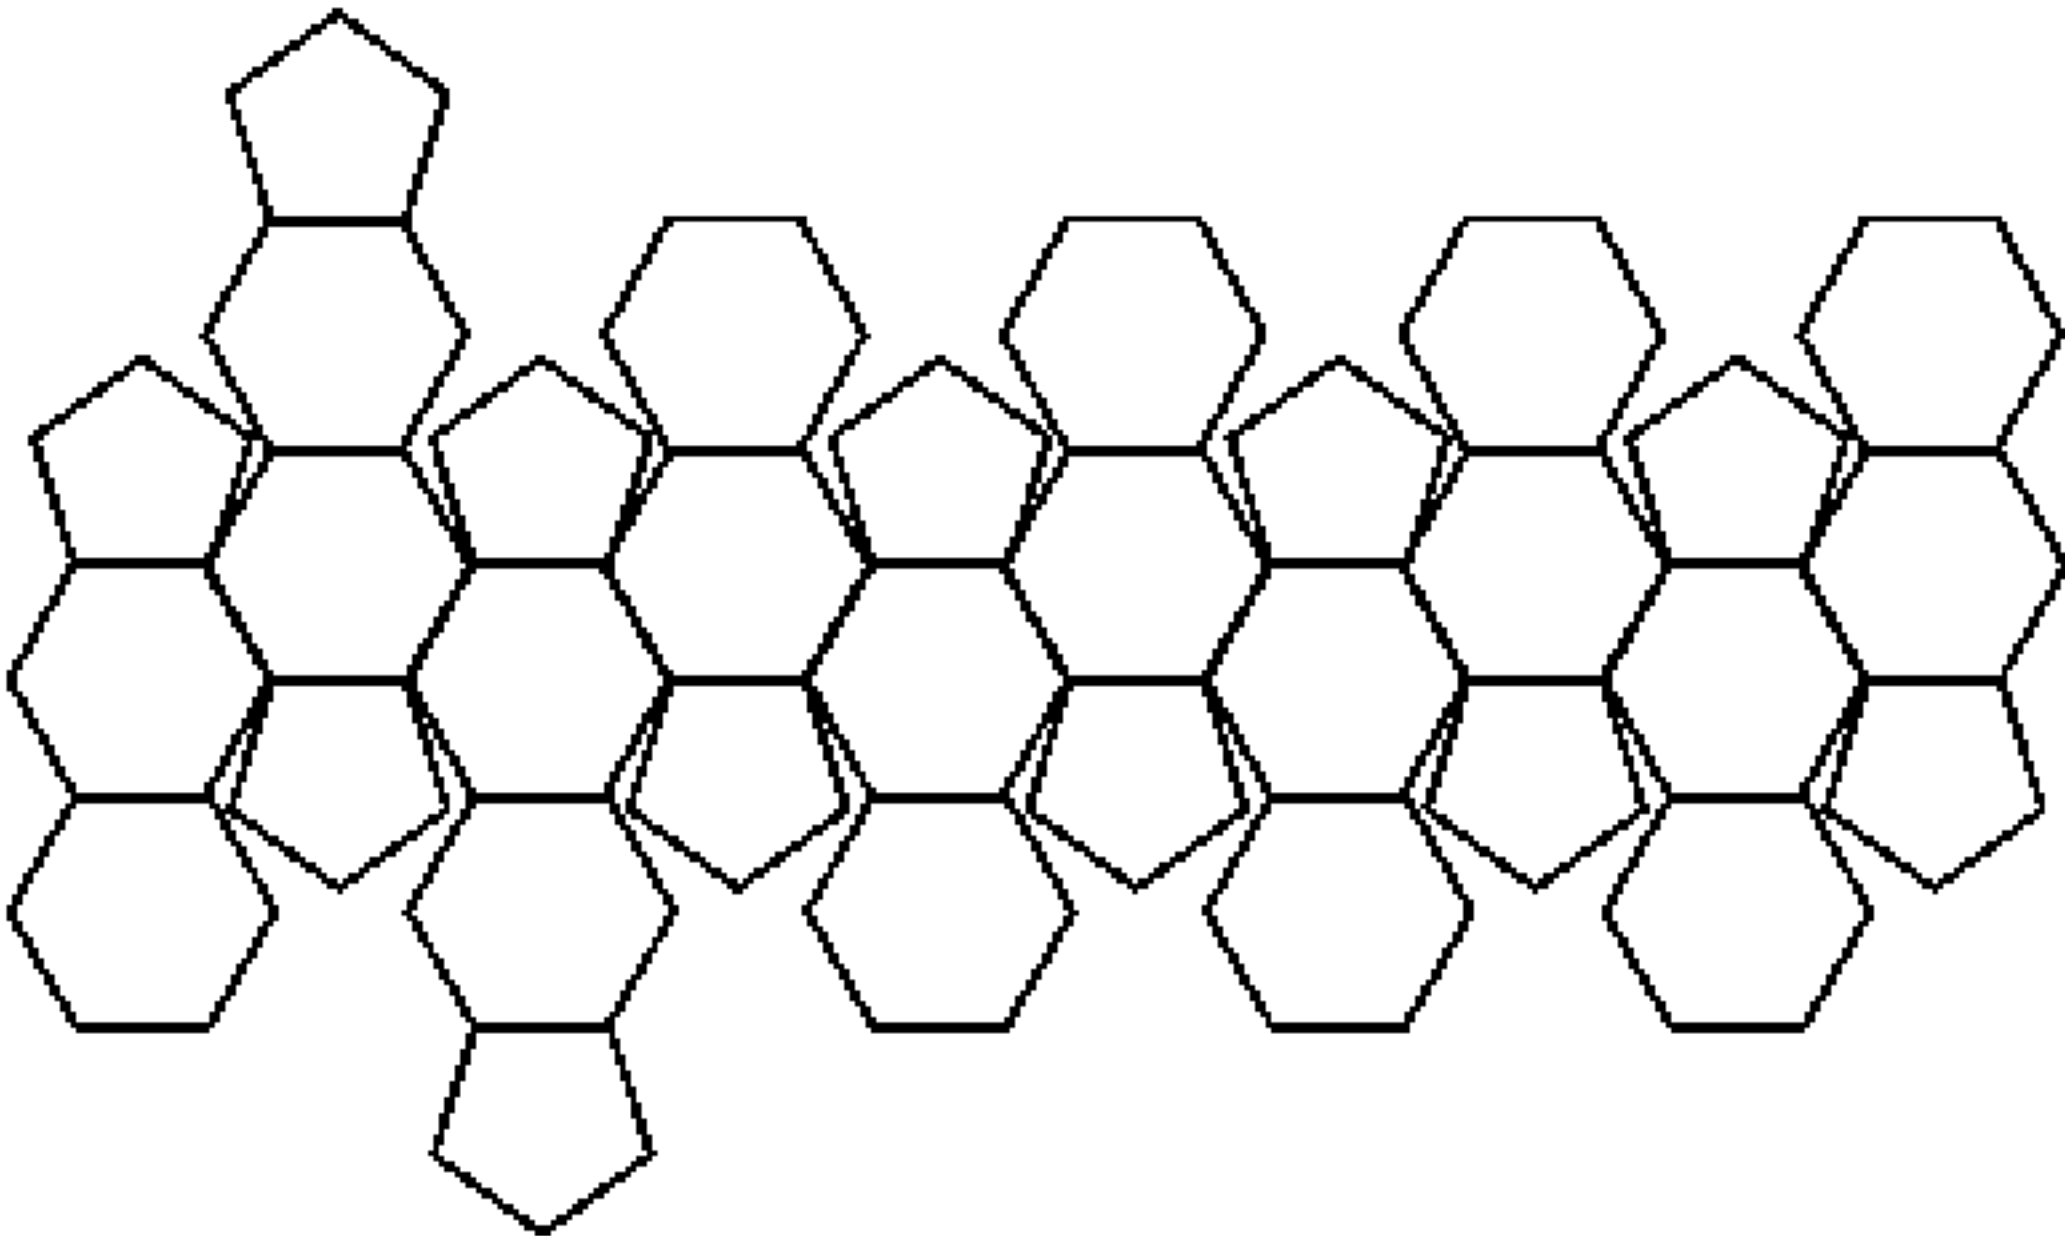

the universe is finite

the law of whole system

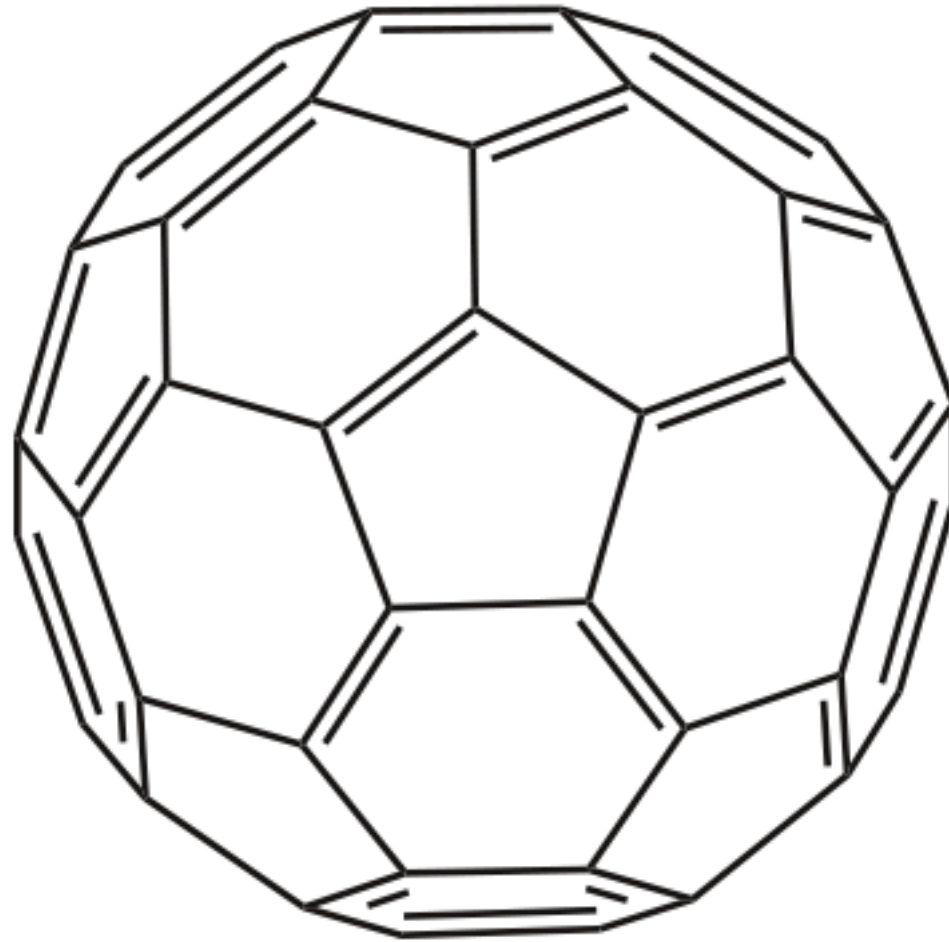

component behaviors may be differentially discovered...in the a priori definitive experience and conception of any given experience-verified system

component behaviors of systems may be predictably differentiated as primary and secondary componential sub-divisions of whole system and then progressively isolated and locally reconsidered for further dichotomy

the law of of structure

local structure is a set of frequency associable recollectable experience relationships having a regenerative constellar patterning as the precessional resultants of concentrically shunted periodic self-interferences or coincidences of its *systematic plurality* of definitive vectorial frequency, wave length and angle interrelationships

the law of of structure

the precessionally regenerative concentricity of structure is *antientropic* and evolves toward optimally economic local compressibility and symmetry.
